

# **Social media insights about COVID-19 in Portugal: a text mining approach**

Presented by Joao C Ferreira (ISCTE and INOV at  
Portugal) in CONASENSE 2021 SYMPOSIUM

# Motivation

**COVID-19  
spread**

**Measures  
taken**

**Social and  
economic impact**

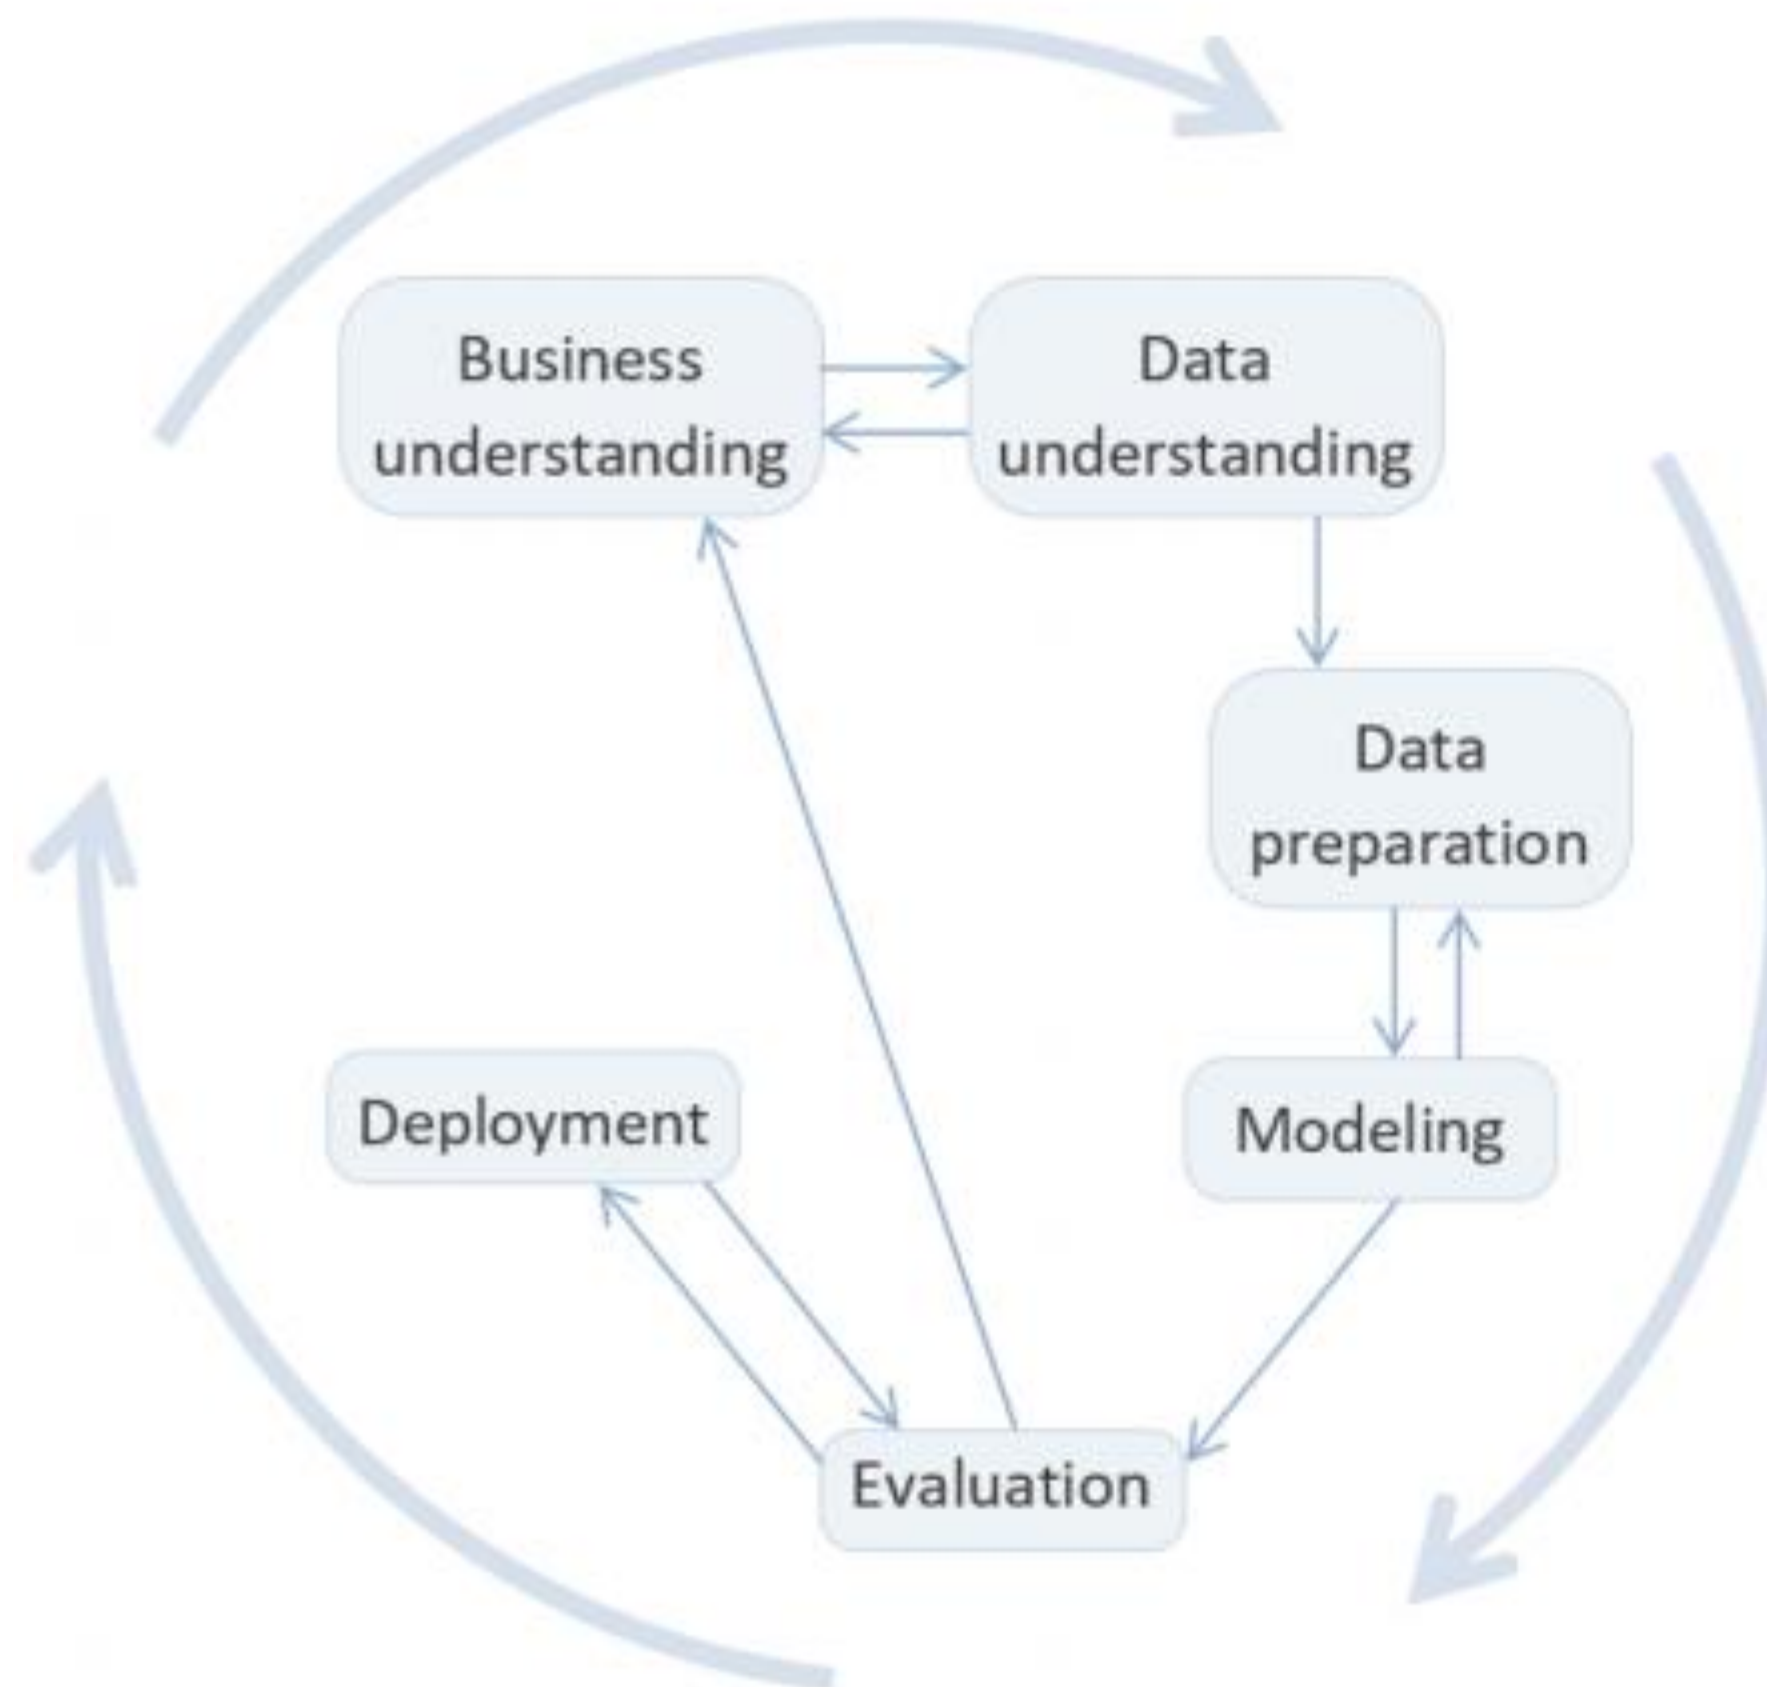

**Sharing on  
social media**

# Main Objectives

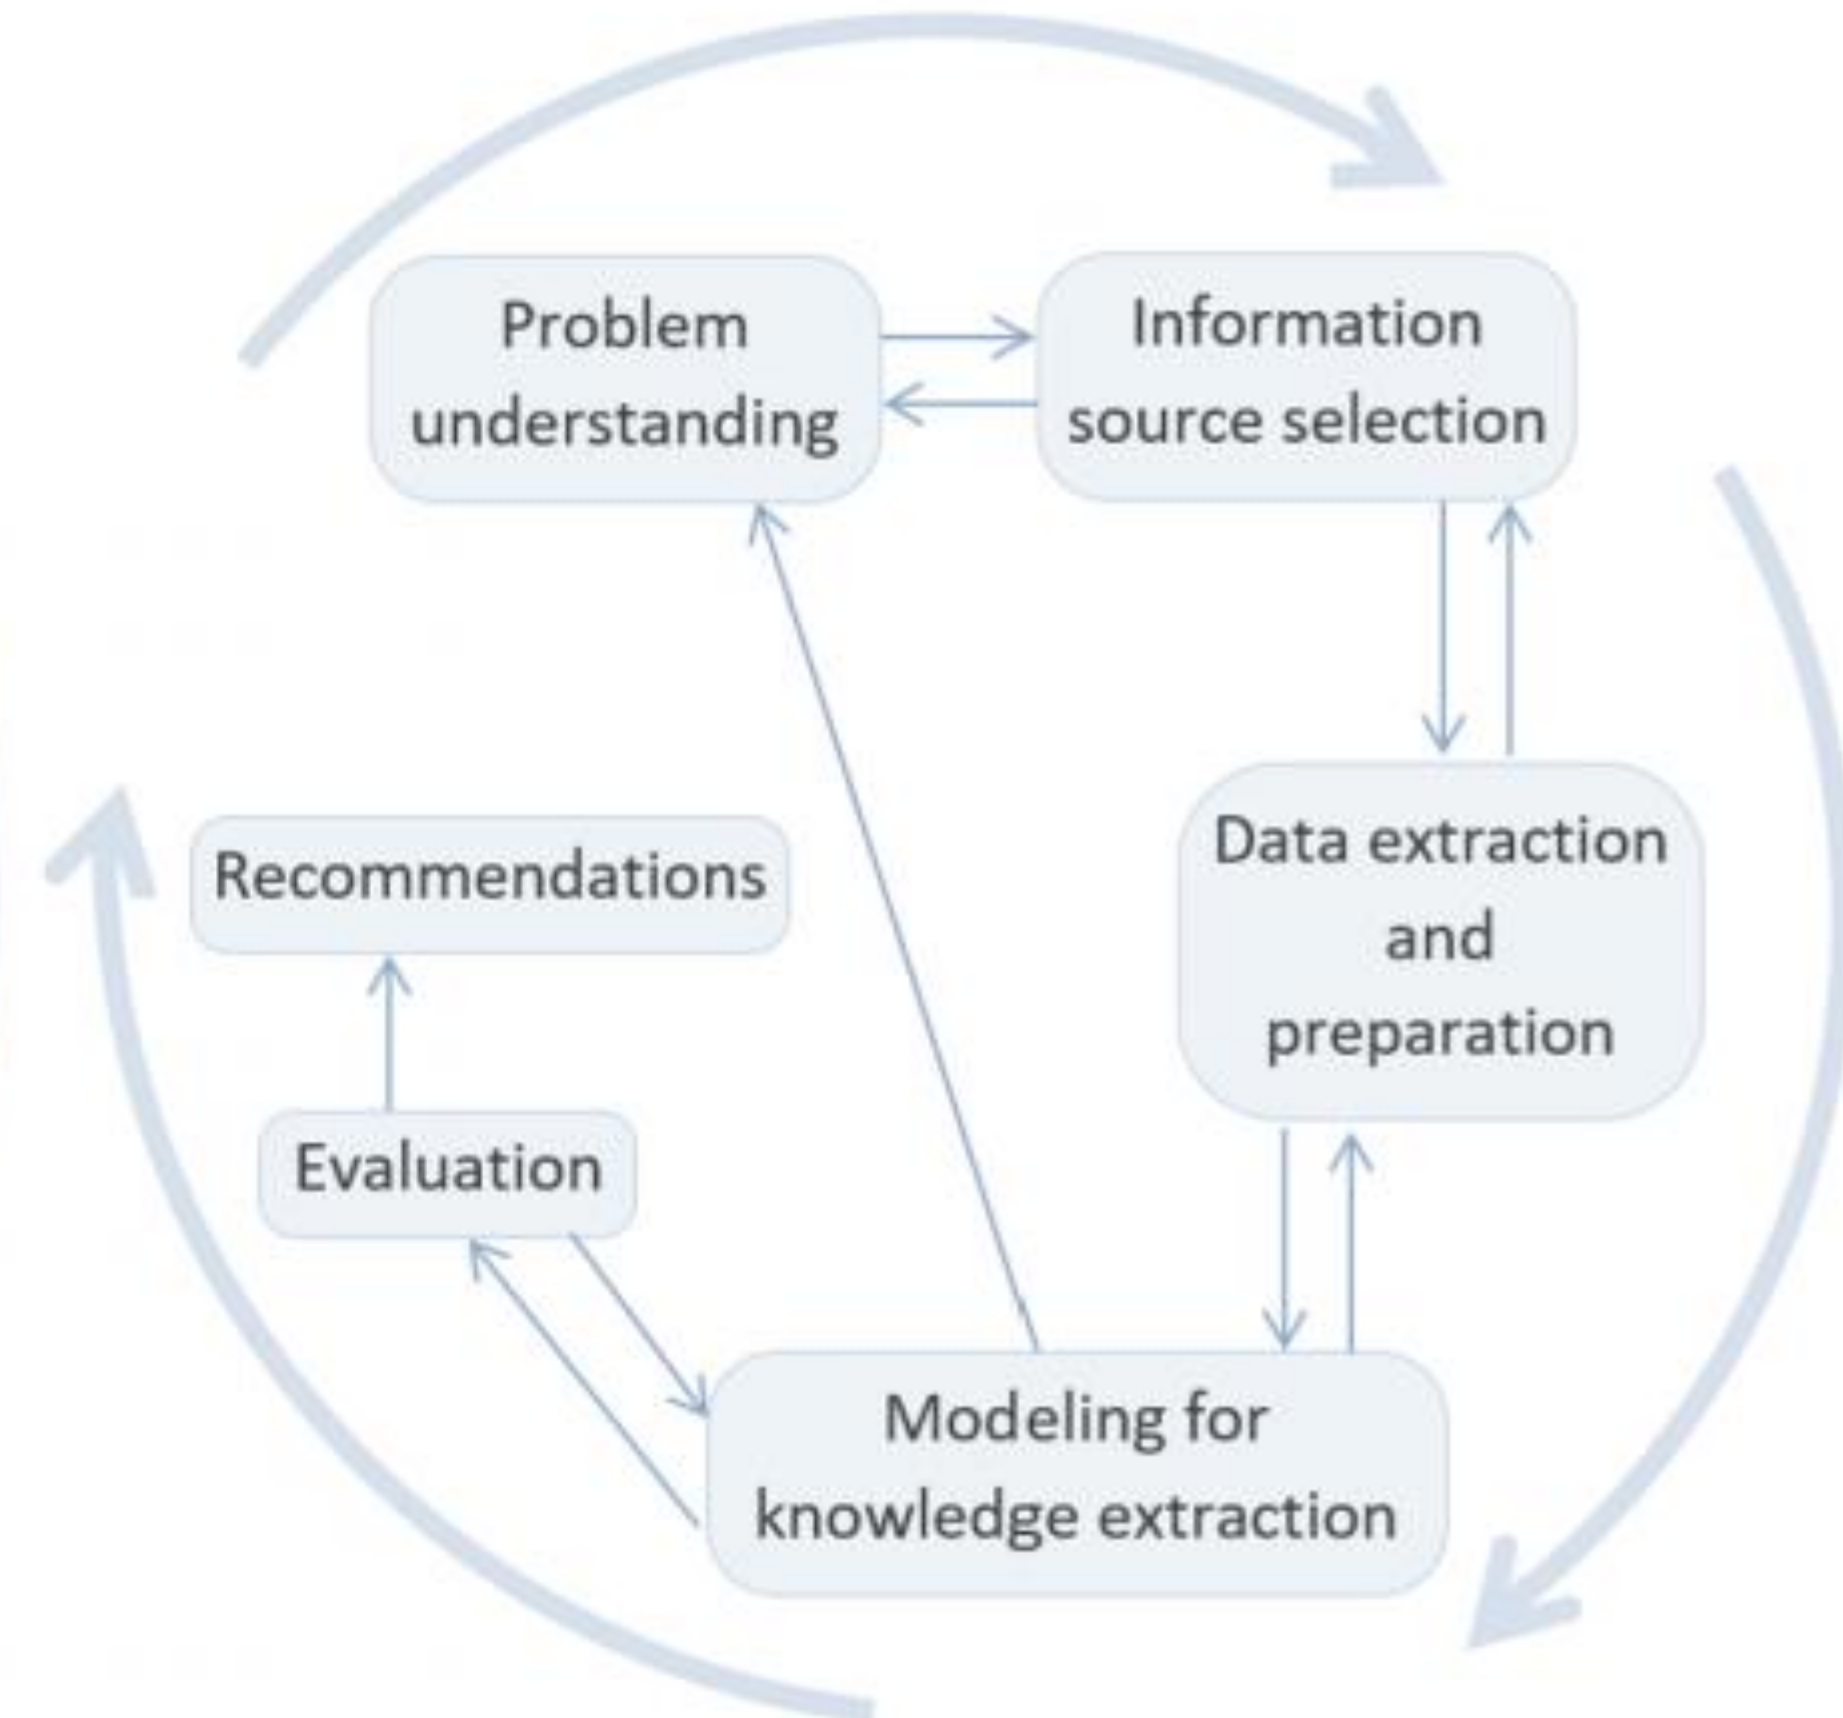

**The purpose of this dissertation is to understand a perception of reality shared on social media, that may also be useful to support decision making within COVID-19 pandemic.**

- **What are the main topics emerging in the social media about the Pandemic context in Portugal?**
- **What themes were identified with the most positive to most negative sentiment?**
- **It is possible to identify parallels between the events that took place in Portugal, in the context of COVID-19, and the sentiments expressed in the social networks?**

**CORONAVÍRUS**

## Cientistas portugueses já estudam como o novo coronavírus entra nas nossas células

Como é que o SARS-Cov-2 consegue penetrar no nosso corpo? Investigadores em Portugal estão a responder a esta questão para que possam contribuir para futuras terapias.

Teresa Sofia Serafim

27 de Março de 2020, 7:10

Receber notificações

Pensemos no vírus SARS-Cov-2 como um ladrão que arromba a porta para entrar dentro das nossas células e nos assaltar. Para isso, usa um pé-de-cabra que tem à sua superfície chamado "proteína da espícula". Depois de ter forçado a entrada, o vírus

state of alert –  
1<sup>st</sup> July to 14<sup>th</sup>  
September

# Application to the Portuguese Context

	Topic Name	Nº of posts	Average sentiment
Twitter	Alcanena	186	-0.06
	Portuguese cases	403	-0.11
	Government measures	240	-0.09
	Lockdown	841	-0.15
	COVID-19 tests	1025	-0.07
	App StayAwayCovid	573	-0.13
Reddit	Portuguese cases	609	-0.37
	Government measures	2 085	-0.26
	COVID-19 tests	683	-0.32
	App StayAwayCovid	439	-0.13
Público	Portuguese cases	360	-0.01
	COVID-19 in Portugal	230	-0.06
	National Health System	270	-0.07
	Government measures	314	-0.12
	Donald Trump	225	-0.04

**6<sup>th</sup> period – Since the end of alert state until the beginning of the second state of emergency – 14<sup>th</sup> September to 8<sup>th</sup> November**

# Evaluation

**The evaluations were performed by three experts:**

- a researcher and specialist in communication and public health,
- a resident public health doctor and consultant in health communication and data visualization,
- the vice president of the National Association of Public Health and coordinator of the combat against COVID-19 in the Azores.

# Evaluation

Criteria	Objective	Eval #1	Eval #2	Eval #3
Efficacy	Effectively inform about the topics and respective sentiment discussed on social media over time, regarding the pandemic situation in Portugal	LA	FA	TA
Consistency with organization /Utility	Obtain insights about a precision of the reality that the Portuguese share in the social media, which may contribute to help decision making of the medical community in Portugal	PA	LA	TA
Clarity	Providing clear and easily understandable information from the dashboards created	TA	LA	LA
Style	Providing appealing and understandable dashboards with straightforward interpretations	LA	TA	TA
Learning capability	Automatically learning about COVID-19 Portuguese insights regarding the discussion of topics and their associated sentiment on social media, during the first year of pandemic	PA	TA	LA

**Not Achieved (NA)**  
**[0-15%]**

**Partially Achieved (PA)**  
**[15-50%]**

**Largely Achieved (LA)**  
**[50-85%]**

**Totally Achieved (TA)**  
**[85-100%]**

# Conclusions

- **We conclude that by using social media, such as Twitter and Reddit, we can reflect a sense of reality with regard to the pandemic situation in Portugal**
- **As for the number of data collected in each of the eight periods, it is possible to conclude that it is influenced by the pandemic events in Portugal**
- **Also, the period where the average sentiment score was registered as more negative corresponds to the first alert state implemented in Portugal, since July 1 until September 14**
- **And the period where the amount of data analysis is higher corresponds to the period of the first compulsory confinement**

# Thank You
